Briton
#1
door hardware choice

Trade **Door Hardware**

ALLEGION™

Make the reliable choice
Make the #1 choice

We are a leading global provider of products and services that make environments safe and secure without inhibiting access or working capability. Our Briton branded ranges of door controls and exit devices have earned an enviable reputation for performance and reliability. Through constant design and development we also help to meet the requirements of The Equality Act so that people with reduced mobility can enjoy ease of access to and within the built environment without compromising security.

This catalogue is an easy to use guide to our trade range of architectural hardware and entry level access control products. It encompasses our major brands of door closers, exit devices, door furniture, lockcases and cylinders.

If you need further details on any of the product lines you can download full specification brochures from our website or for technical queries you can telephone our Technical Helpline.

CONTENTS

CE Mark explained

Door closers are an important link in the control of fire and smoke and their usage can help save lives.

From July 2013 it became a legal requirement for all products which are covered by a harmonised EN standard to be CE marked before they can be placed on the market.

For door closing devices, EN 1154 and EN 1155 became harmonised standards across Europe and are now the standards required in order to attain CE marking. Validation of the CE mark requires the production of a Declaration of Performance (DoP) by the manufacturer.

DoPs for all Briton door controls are available on our website at:

www.britondops.co.uk

The Equalities Act - disability legislation

Legislation aimed at providing universal accessibility of buildings requires service providers to make "reasonable adjustments to the physical features of their premises to overcome barriers to access".

Approved Doc M of the Building Regulations and BS 8300 provide guidance in establishing recommended opening forces for door controls to assist less able users.

High efficiency Briton closers which are capable of meeting the required levels of opening and closing forces are marked with the "Wheelchair Symbol" but accurate installation, hinge friction, door seals and variable air pressure can all have a bearing on the opening resistance of the final doorset.

For doors which must also meet the stringent closing force requirements for fire door applications, it may be more appropriate to use electromagnetic hold open or swing free closers or a powered opening solution.

Closer power (EN 1154)

To determine which closer size you require use the table below. Many Briton closers have adjustable power which allows you to adjust the power to suit the situation.

EN Closer Size	Recommended Door Width - Max.	Door Weight
1	750mm	20kg
2	850mm	40kg
3	950mm	60kg
4	1100mm	80kg
5	1250mm	100kg
6	1400mm	120kg
7	1600mm	160kg

Fire door applications

For fire door applications a closer with power size 3 is a minimum requirement.

Adjustable closing power - Template Adjustable
The closing power is adjusted by varying the mounting position on the door/frame. Once fitted the power cannot be adjusted.

Adjustable closing power - Spring Adjustable
The closing power is adjusted by spring compression once the closer is installed. Power can be adjusted at any time and with much finer control.

Adjustable closing speed
Speed of closing is adjustable from 180° opening through to the final 15°.

Adjustable latch action
The speed of closing in the last 15° can be adjusted to overcome seals and latches.

Backcheck
In-built cushioning towards the end of the opening cycle to minimise the risk of personal injury and damage to adjacent walls.

Delayed Action
Delays the closing cycle to allow slow moving pedestrians to pass through unhindered by the closing door.

Adjustable hold-open
Mechanical and electro-magnetic hold-open variants are available to hold the door in the open position (see page 6).

Fitting application guide

Surface mounted overhead door closers are normally supplied with either a projecting arm and bracket (sometimes referred to as scissor arm) or with a slide arm and track (sometimes called track arm).

Projecting arm closers can generally be fixed in one of three ways depending on the door location and frame configuration. Most Briton door closers are supplied **Tri-packed** meaning that they contain the necessary brackets and fixings to enable them to be fitted in any of the applications below [**1 - 3**].
Slide arm or track arm closers can be door or transom mounted [**4 - 5**] on the push or pull side of the door but you will need to be aware which configuration you need before ordering.
Standard Scissor Arm Applications
1. Regular fixing

Closer body mounted on the pull face of the door.

2. Transom fixing

Closer body mounted on the transom on the push side of the door.

3. Parallel fixing

Closer body mounted on the push side of the door.

Track Closer Applications
4. Door mounted pull side

Closer body mounted on the pull face of the door with slide track on the head frame. Most slide arm closers can also be mounted with the closer body on the head frame and the slide track on the door.
5. Door mounted push side

Closer body mounted on the push face of the door with slide track mounted on or under the head frame. Most slide arm closers can also be mounted with the closer body on the head frame and the slide track on the door.

Mechanical hold-open unit

Mechanical hold-open is achieved by substituting the standard armset with a hold-open armset (or a component concealed within the slide track). It enables doors to be securely held in the open position at a pre-set angle (adjustable on installation depending on model and the mounting application).

The hold-open facility can be easily overridden and the force required to release the hold-open action can be adjusted to suit the weight of door.

Please note, mechanical hold-open is not permitted on fire door applications.

Electromagnetic hold-open or swing-free

Electromagnetic hold-open or swing-free closers allow a door to be held open (or free to swing) in normal use but close under spring power in the event of a fire or power failure. This can be achieved using a closer which has an electromagnetic function integrated into the closer mechanism, or by using a separate electromagnetic holder in conjunction with a standard door closer. The electromagnet temporarily disables the spring mechanism which is automatically re-connected in the event of an alarm or power failure.

Please note, electromagnetic hold-open or swing-free is permitted on fire door applications when connected into the building fire alarm or smoke detection system.

Briton 121CE — Overhead Door Closer

General Description

A compact, template adjustable or fixed power closer suitable for light to medium duty applications. This cost effective closer exhibits the characteristics of performance, durability and quality that you expect from a Briton door closer, and is certified in all applications and easy to install.

Principal Features

- Clear installation instructions
- Fitting template for quick, accurate installation
- Universal fittings for regular, transom or parallel mount fitting
- Smooth, quiet operation
- Adjustable closing speed & latch action
- Optional hold open armset available (NOT TO BE USED ON FIRE DOORS)

- Testing: EN 1154 and CE Marked EN 1634 for up to 2 hour timber fire door
- Certifire Approved CF390
- Guarantee: 10 years

CE   certifire   2hr TIMBER   EPD

(AD0248)

Finishes

Available in a choice of sprayed finishes (see page 167 for full details).

Certifire

Approval covers EN 3 in regular, transom and parallel applications.

Briton 1130B.TE   Electromagnetic Hold–Open Closer

General Description

Linked to the building's alarm system, electromagnetic door controls eliminate the illegal practice of wedging doors open. This dangerous practice prevents a fire door functioning as it should in stopping the spread of flames and smoke in the event of a fire.

This option also offers a means of providing access through doors which might otherwise be difficult for elderly or disabled users to negotiate.

Briton 1130B.TE with trimplate cover in SES finish

Briton 1130B.TE.S with Softline cover in SES finish

Certifire

Approval covers EN 3 - 4 in regular applications only

Principal Features

■ Fully certified to EN 1154 and EN 1155

■ Designed for use on low voltage circuits 24V DC linked to a fire alarm

■ Electromagnetic Hold-Open function

■ Adjustable backcheck

■ On-board test switch simulates fire alarm status

■ Testing: EN 1154, EN 1155 and CE Marked
EN 1634 fire testing for:
2 hour timber fire doors
4 hour steel fire doors

■ Certifire Approved

■ Guarantee: 10 years mechanical
2 years electrical

(AE0026)

Finishes

Available in a choice of sprayed finishes and plated metallic finishes all with matching arm and track.

Functions

Hold Open. In hold open operation, the door can be kept in an open position. When reactivated by alarm activation, the hold open mechanism is released and the door is closed under the spring power of the closer.

Item Ref:	Description	EN Power Size	Finishes
1130B.TE	Electromagnetic hold open closer with Trimplate	Spring power adjustable size 3 - 4	SES;

Briton 2300 Series — Adjustable Power Cam Action Closers

General Description

The Briton 2300 Series is offered as a simplified version of the Briton 2700 and is available with either a slide in trimplate or with a curved 'Softline' all-over cover which will suite with other Briton overhead door controls.

Briton 2320B.T.S with Softline Cover Option in SS finish

Briton 2320B.T with trimplate in SES finish

Principal Features

- CE Marked (AD5118)
- High efficiency cam action technology
- Simple to install using the unique Accufit installation system
- Capable of meeting BS8300 requirements for use on accessible routes
- Radiused trimplate cover conceals fixings and adjustment screws
- Optional all over Softline cover to suite with other Briton closers
- Fully adjustable for closing speed, latch action and backcheck
- Optional hold-open kit

- Testing: EN 1154 and CE Marked EN 1634 fire testing for: 2 hour timber fire doors
- Certifire Approved (CF5291)
- Guarantee: 10 years

(AD5118)

Finishes

Available in a range of sprayed finishes, solid or plated metallic finishes.

(see page 167 for details)

Briton 2400 Series   Concealed Cam Action Closer

Briton 2420.T - Door mounted orientation

Briton 2420.T - Transom mounted orientation

Briton 2420.T

General Description

The Briton 2400 Series is a precision manufactured cam-action, slide channel door closer, in a compact concealed unit. With the closer body mounted within the top of the door and the slide track within the head frame, the Briton 2400 Series offers high resistance to abuse and offers a highly aesthetic solution being fully concealed when the door is closed. Suitable for doors 44mm thick and above.

Principal Features

- CE Marked (AD5114)*
- High efficiency cam action technology
- Capable of meeting BS8300 requirements for use on accessible routes
- Max. angle of opening 120˚
- Fully adjustable for closing speed and latch action
- Optional 'cushion stop' to prevent damage to the door (please note, this is not a full backcheck feature)
- Optional hold-open kit (NOT TO BE USED ON FIRE DOORS)
- Intumescent gasket kit required for fire door applications
- Powder coated steel track arm with nylon runner

- Testing: EN 1154 and CE Marked EN 1634 fire testing for use on timber doors up to 90 mins

  FD30 - Min. door thickness 44mm

  FD60 - Min. door thickness 54mm

  FD90 - Min. door thickness 58mm

2420.IP	Intumescent gasket set for use with timber fire doors		

Briton 2420T - Door mounted

Briton 2420T - Transom mounted
Mechanical Hold Open Unit

The hold open unit is achieved by use of a conversion kit which can be installed into the slide track of the mechanical closers in place of the standard pivot block. It enables doors to be securely held in the open position at the required pre-set angle (adjustable on installation from 80° to 120° depending on model and the mounting application).

The hold open facility can be easily released.

Please note, mechanical hold open is not permitted on fire door applications.

Intumescent gasket set (2420.IP)

A significant amount of fire resisting doorset material is removed when concealed closers are mortised into the door leaf. The intumescent gasket set will provide the additional performance that is required to protect the door from integrity failure during fire conditions.

It is particularly important with these closers to check that the details of the fire test certification are relevant to your intended door application.

Briton
Briton 2700 Series — Adjustable Power Cam Action Closers

General Description

The Briton 2700 Series of door controls is a precision manufactured cam-action slide track closer in a compact surface fixed unit. Providing easy opening with safe reliable closing the Briton 2700 Series bridges the gap between the requirements for fire and smoke control and ease of operation required for accessibility.

Briton 2720BD.T.A with Slimline Cover Option in SES finish

Briton 2720BD.T.S with Softline Cover Option in SSS finish

Principal Features

- CE Marked (AD0264)
- High efficiency cam action technology
- Simple to install using the unique Accufit installation system
- Capable of meeting BS8300 requirements for use on accessible routes
- Adjustable closing speed and FAST ™ Power Adjust dial feature allows easy power adjustment to suit door conditions
- Choice of Slimline or Softline cover
- Cover secured by spring clips for quick installation and no visible fixings
- Fully adjustable for closing speed, latch action, backcheck, delayed action and hold-open

- Testing: EN 1154 and CE Marked EN 1634 fire testing for: 2 hour timber fire doors 1 hour steel fire doors
- Certifire Approved CF738
- Guarantee: 10 years

Channel to Angle Bracket M5 x 25mm pan head machine screws
Briton 2700 Series — Electromagnetic Hold Open Closer

General Description

Linked to the building's alarm system, electromagnetic door controls eliminate the illegal practice of wedging doors open. This dangerous practice prevents a fire door functioning as it should in stopping the spread of flames and smoke in the event of a fire.

This option also offers a means of providing access through doors which might otherwise be difficult for elderly or disabled users to negotiate.

Principal Features

- CE Marked and fully certified to EN 1154 and EN 1155
- Designed for use on low voltage circuits 24V DC linked to a fire alarm
- High efficiency cam action technology
- Electromagnetic hold-open
- Adjustable backcheck
- Adjustable delayed action
- On-board test switch simulates fire alarm
- Capable of meeting BS8300 requirements

- Testing: EN 1154, EN 1155 and CE Marked
  EN 1634 fire testing for:
  2 hour timber fire doors
  1 hour steel fire doors
  Certifire Approved CF738

Briton 996 Series — Electromagnetic Hold Open or Swing Free

Dual Function (set at installation)

Hold Open. In hold open operation, the door can be kept in an open position. When reactivated by alarm activation, the hold open mechanism is released and the door is closed under the spring power of the closer.

Swing Free. In swing free operation, the spring mechanism of the closer is temporarily disabled so that the door is free to open and close. When the alarm is activated the spring power of the closer is reactivated and will close the door if it is open.

Principal Features

- CE Marked   (AE0007 - Briton 9963)
                   (AE0008 - Briton 9964)
                   (AE0012 - Briton 9965)

- Fully certified to EN 1154 and EN 1155

- Designed for use on low voltage circuits 24V DC linked to a fire alarm

- Dual function can be set to either Hold Open or Swing Free operation

- Capable of meeting BS8300 requirements

- Supplied with matching or black arms

- Testing: CE Marked to EN 1154 & EN 1155
                   EN 1634 fire testing for: 2 hour timber fire doors

- Certifire Approved CF109

Panic or Emergency

It is mandatory for all exit devices to comply with the latest revisions of EN 1125 or EN 179 and CE marking.

All Briton 560, 570, 580 and 376 Series exit devices have been tested and certified to prove compliance with the latest standards EN 1125 & EN 179 which govern the application of panic and emergency exit hardware, but which standard applies to which application, and what determines which one I need?

Panic Applications to EN 1125

A *'panic'* application is where the exit door is used by members of the public and must provide "safe and effective escape through the doorway with minimum effort and without prior knowledge of operation".

Typical applications include:

- Shops
- Schools
- Hospitals
- Theatres and Cinemas

Products used in panic applications require an operating device that covers the width of the door e.g. crossbars or touch bars.

Emergency Applications to EN 179

An *'emergency'* application is where the exit door is in a low occupancy environment and will only be used by trained personnel, such as in a place of work never accessed by the public or people unfamiliar with the escape drill.

- Typical applications include:
- Offices
- Private Flats & Apartments
- Factories
- Store Rooms & Boiler Rooms

Products used in emergency applications require only a single point of operation e.g. pushpads or levers.

If in doubt ALWAYS choose a product certified to EN1125

CE Classifications - Under both standards (EN 1125 and EN 179), each product is classified and graded to identify the level of compliance and type of unit within each category using a 10 digit code.

Category of Use 3 = high frequency	Durability 7 = 200,000 cycles	Door size/mass 6 = doors up to 200kg	Fire resistance (EN1634) B = suitable for fire doors	Safety Critical safety function	Corrosion resistance 3 = high resistance	Security 2 = up to 1000N	Device projection 1 = up to 150mm 2 = up to 100mm	Type of operation Touch bar/Push bar or Push pad	Field of door application relating to single/double doors

Briton Panic   Selector

Which system to choose

Having first determined whether the application requires a panic or emergency exit solution there are number of additional considerations which will determine the most appropriate product. These could include:

- Aesthetic considerations - push bar or touch bar
- Designed to satisfy ANSI or EN standards
- Single point or multi-point latching for security
- Frequency of use may require a heavy duty solution
- Additional features such as hold-back or alarm connection
- Use of electric latch retraction to allow the use of electronic access control for external access
- Outside access device for external entry by key or digital code

Briton

Briton 560 Series

Push Bar Panic Exit Hardware

General Description

Briton 560 Series panic exit devices have been designed to offer modular solutions. Comprising of a one-point locking push bar and optional modular locking elements, these units offer increased flexibility and adaptability to suit individual requirements.

Each system can be built up by the use of additional pullman latching elements. Start by choosing an operating unit and add side or top/bottom pullman kits as required for multi point latching.

574.VS.R.SE*
(order 574.VS.L.SE for a left hand device)

561.SES

574.VS.R.SE*
(order 574.VS.L.SE for a left hand device)

Ordering the right components

When ordering multi point latching options ensure you order a **561** operating device **PLUS** the appropriate pullman latch kit if required*.

Make sure the finish of the pullman latch kit co-ordinates with the finish of the operating device.

For double door configurations ensure you order **ALL** the components listed in the table opposite.

Principal Features

- CE Marked to EN 1125 (AAA1589)
- Unique assembly which reduces installation time by as much as 50%
- Pullman design is connected to the operating device by a unique adjustable cable with matching covers
- Operating heads and pullmans installed using quick fix mounting backplates
- Robust construction for heavy traffic applications
- Reversible on-site for left or right hand
- Technologically advanced design with proven performance and reliability
- Shaped cross bar end piece to allow easier access to door lock
- Suitable for doors with a minimum clear opening width down to 500mm
- Supplied with an easy clean socket

- Testing: EN 1125 and CE Marked EN 1634 fire testing for: 2 hour timber fire doors

- **Classification to EN 1125**

General Description

Briton 570 Series panic exit devices have been designed to offer modular solutions. Comprising of a one-point locking touch bar and optional modular locking elements, these units offer increased flexibility and adaptability to suit individual requirements.

Each system can be built up by the use of additional pullman latching elements. Start by choosing an operating unit and add side or top/bottom pullman kits as required for multi point latching.

Ordering the right components

When ordering multi point latching options ensure you order a **571** operating device **PLUS** the appropriate pullman latch kit if required*.

Make sure the finish of the pullman latch kit co-ordinates with the finish of the operating device.

Principal Features

- CE Marked to EN 1125 (AAA1588)
- Unique assembly which reduces installation time by as much as 50%
- Pullman design is connected to the operating device by a unique adjustable cable with matching covers
- Operating heads and pullmans installed using quick fix mounting backplates
- Robust construction for heavy traffic applications
- Non handed
- Technologically advanced design with proven performance and reliability
- Grip function on touch bar to allow the door to be pulled closed
- Suitable for doors with a minimum clear opening width down to 500mm
- Supplied with an easy clean socket
- Proective anti-bacterial coating

- Testing: EN 1125 and CE Marked EN 1634 fire testing for: 2 hour timber fire doors

- **Classification to EN 1125**
  3 7 7 B 1 4 2 2 B A

- Guarantee: 5 years

Briton 571.EL   Electromechanical Touch Bar Device

General Description

The Briton 571 EL electronic panic exit device combines the mechanical features of the standard 570 Series touch bar panic exit hardware with electronic motorised control.

It presents innovative methods for opening doors, selecting access rights, providing open control, freedom and flexibility, including hierarchical authority and timings.

It is ideal for high footfall buildings such as schools, offices and hospitals, where many employee and staff entrances will also be one of the fire exits the building.
Principal Features

- CE Marked (1589)
- Fully certified to EN 1125
- Non handed
- Suitable for doors from 1200 mm down to 600 mm (with the same device)
- Suitable for use also with existing access control system
- Low power usage
- Power supply AC 12-20V (50/60 Hz), DC 12-24V
- Absorbed current (max) 1.5 A (12Vdc)
- Absorbed current (stand by, OUT1-OUT2 not connected) 5mA (12Vdc)
- Length of connecting cable 4 m
- Degree of protection IP20
- Operating temperature: -10 - +50ºC
- Recommended power supply equal to or above 15 VA (not provided)
- Warning buzzer
- Timed latch withdrawal after opening, adjustable from 3 to 30 second
- Electronic dogging possible
- Protective anti-bacterial coating applied

- Testing: EN 1125 and CE Marked
- **Classification to EN 1125**
  3 7 7 B 1 4 2 2 B A

- Guarantee: 2 years

Finishes

As for 570 Series (see page 38)

Briton 571.EL Electromechanical Touch Bar Device

Operation

The panic exit device has the same features as the mechanical version, in accordance with standard EN1125, and has the additional power-assisted opening function thanks to the interaction between the mechanics and the electronics.
Locking options

The Briton 571.EL may be used as a single rim latch or in conjunction with the standard Briton 570 Series pullman latch kits to create multi-point latching for single or double door combinations. See page 43 for details.

571.1.EL	**571.1.EL**	**571.1.EL**	**571.1.EL**
	574.V	**574.S**	**574.VS**

Item Ref:	Description	EN Classification	Centres	Backset	Finishes
571.1.EL	1200mm motorised touch bar device	3M810F-B020	n/a	60mm	SS; PS
571.2.EL	840mm motorised touch bar device	3M810F-B020	n/a	60mm	SS; PS

The Briton 571 EL panic hardware device can be integrated with a wide range of electronic access control systems including the SimonsVoss and CISA access control options. This provides convenient and controlled access from the outside by pin code or contactless proximity reader, transforming emergency exit doors into effective "smart" entrances.

Briton 573.N — Touch Bar Panic Exit Hardware

General Description

Briton 573.N is a touch bar panic exit operator designed specifically for use with a mortice nightlatch. The device is suitable for single doors and the primary leaf of a non-rebated double door.

573.N.1.SES

Briton 581   Push Pad Emergency Exit Hardware

General Description

Briton 581 is a Push Pad emergency exit latch designed to provide single point locking but capable of expansion using the Briton 574 pullman latch kits to provide multi point locking.

Principal Features

- CE Marked TO EN 179(2520)
- Robust construction for heavy traffic
- Non handed
- Technologically advanced design with proven performance and reliability
- Suitable for single doors and in combination on double doors
- Suitable for any door width
- Supplied with strike plate
- Slimline design - body width 42.8mm
- Suitable for doors over 200kg
- Security Grade 5 - 5000N
- Very high corrosion resistance

- Testing: EN 179 and CE Marked

- **Classification to EN 179**

Briton 560 - 570 Series   Outside Access Devices

1413.LE

1413.KE

9260

General Description

A series of outside access devices which can be used with any of the Briton 560 and 570 Series panic and emergency exit devices. They provide a simple means of accessing the door from the outside.

Principal Features

- Fully compatible with Briton 560 and 570 Series devices
- For single and double doors when fitted to the first opening leaf of a pair
- Self handed or site reversible
- Anti-vandal design
- Clutch mechanism allows variable lever rotation
- BS 8300 compliant key retention (optional)
- Supplied with 40mm euro profile cylinder as standard (keyed alike or masterkeyed)
- Can be incorporated into existing masterkey system
- Suitable for doors 40mm - 70mm thick
- Easy retrofit on existing models (Retro Plate required)
- 9260 Digital code lock option has over 2000 non sequential code options
- 9260 supplied with extra long spindles for use with Briton exit devices
- 9260 code can be changed by removing the unit from the door
- Guarantee: 5 years

Briton

Briton 376 Series — Push Bar Panic Exit Hardware

376.SE

General Description

Briton 376 Series is a comprehensive range of push bar exit devices. Designed to satisfy requirements for panic and emergency exit applications, these long established panic exit devices are ideal for public areas where additional security is required.

Principal Features

- CE Marked (AAA011)
- Fully certified to EN 1125 or EN 179
- Products designed to satisfy panic exit applications and emergency exit applications
- Suitable for single and double doors
- Self handed or site reversible
- Durable aluminium die cast body and end boxes with extruded aluminium guides
- Steel shoot bolts
- Tubular steel shoots and cross bar can be cut on-site to suit door width and height
- Options include manual dogging, alarmed versions and pullman latches

---

- Testing: EN 1125 and CE Marked EN 1634 fire testing for: 2 hour timber fire doors 4 hour steel fire doors
- Certifire Approved CF5506

Briton 376 Series   Push Bar Panic Exit Hardware

General Description

Push bar panic exit device with vertical bolts top and bottom. Suitable for single and double doors up to 2500mm (h) x 1300mm (w). Designed to satisfy requirements for panic and emergency exit applications. Features an anti-thrust device to prevent forced latch retraction and two point locking for extra security.
Additional Features

- CE Marked to EN 1125 for public applications
- Suitable for use on fire and smoke doors
- Clear fitting instructions for quick and easy installation
- Self-handed and site reversible
- Adjustable top & bottom shoots
- Supplied with 'Easy Clean' socket
- Tested to over 200,000 cycles
Item Ref:	Description	Finishes

376.P	Push bar panic exit bolt with pullman latches	
376.PD	Push bar panic exit bolt with pullman latches and manual dogging	

Optional pullman latches provide smooth and quiet operation

Briton 376MDS (illustrated above) for vertical panic bolts comprises 2 strike plates and 1 trip plate to activate the top tripper

Briton 378   Push Bar Panic Exit Latch

General Description

Push bar panic exit rim latch with single point latching. Designed to satisfy panic and emergency exit applications. Suitable for doors up to 2500mm high x 1300mm wide, single and double when used in combination with the 376 panic bolt. Features an anti-thrust device to prevent unauthorised latch bolt retraction.

Additional Features

- CE Marked (AAA011)
- Certified to EN1125 for public applications
- Suitable for use on fire & smoke doors
- Clear fitting instructions for quick and easy installation
- Single point latching
- Self-handed and site reversible
- Tested to over 200,000 cycles

Briton 379.N — Push Bar Panic Exit with Mortice Nightlatch

General Description

The Briton 379.N push bar panic exit device with mortice panic nightlatch is suitable for single and double doors. Featuring an anti-thrust device to prevent forced latch retraction, this well-known exit device is ideal for public areas where additional security is required.

Additional Features

- CE Marked (AAA011)
- Certified to EN1125 for public applications
- Suitable for use on fire & smoke doors up to 1300m wide
- Clear fitting instructions for quick and easy installation
- Supplied with dual profile cylinder mortice nightlatch (not supplied)
- Self-handed and site reversible.
- Tested to over 200,000 cycles

Item Ref:	Description	Finishes
379.N	Push bar panic exit device with mortice nightlatch	SE; PB; SS; PS
379.NA	Push bar panic exit device with mortice nightlatch and built-in alarm switch

379M.N	Push bar panic exit device with mortice nightlatch with fixings and strike for metal doors	
Briton 379MDS metal box strike for use with **Briton 379.N** mortice panic nightlatch.

All Briton exit devices are supplied with self-tapping screws as standard, which are suitable for both timber and metal doorsets.

For customers who prefer machine screws, alternative fixing packs are available.

For more information please call our Customer Care team on 0330 8080 617.

Briton 372 — Push Pad Emergency Exit Bolt

General Description

Push pad operated emergency exit device with vertical bolts top and bottom. Suitable for single and double doors up to 2500mm high.

Designed to satisfy requirements for emergency exit applications. Features an anti-thrust device to prevent forced latch retraction and two point locking for extra security.

Additional Features

- CE marked to EN 179 (ABB020)
- Fully certified to EN 179 for use in Emergency Exit applications
- Double vertical bolts
- Suitable for single and double doors
- Suitable for doors up to 2500mm high
- Self handed
- Adjustable top and bottom shoots
- Supplied with easy clean socket
- Optional pullman latches
- **Classification to EN 179**

Briton 376 Series   Outside Access Devices

General Description

A series of outside access devices which can be used with any of the Briton 376 Series panic and emergency exit devices. They provide a simple means of accessing the door from the outside.

1413.LE

- For single and double doors (fitted to the first opening leaf)
- Site reversible
- Anti-vandal design
- Clutch mechanism allows variable lever rotation
- BS 8300 compliant key retention (optional)
- Supplied with 40mm euro profile cylinder as standard (available keyed alike or masterkeyed)
- Can be incorporated into existing masterkey system
- For doors 40 - 70mm thick
- Easy retrofit on existing models (Retro Plate required)

1413.KE

- For single and double doors (fitted to the first opening leaf)
- Self handed
- BS 8300 compliant key retention (optional)
- Supplied with 40mm euro profile cylinder as standard (available keyed alike or masterkeyed)
- Can be incorporated into existing masterkey system
- For doors 40 - 70mm thick
- Easy retrofit on existing models (Retro Plate required)

9260

- For single and double doors (fitted to the first opening leaf)
- Site reversible
- Digital code lock with 2047 non sequential code options
- Supplied with extra long spindles to suit Briton exit devices
- For doors 40 - 60mm thick
- Code can be changed by removing the unit from the door

Please Note: 9260 mechanical digital lock is not compatible with Briton 379.N

Item Ref:	Description	Available for:	Finishes
1413.KE	Outside access device with knob operation	376 Series (all models)	SE; SS; PS; PB
1413.LE	Outside access device with lever operation	376 Series (all models)	
9260	Outside access device with mechanical digital code	376 & 378 (all models); 377; 372; 372.P; 1438	PVD - SS

The basics of mechanical locking

For most doors, particularly internal doors, a mechanical lockcase represents the most effective and direct means of providing privacy and security for commercial applications, and for all residential applications.

Mechanical locks fall into three principal categories:

- Mortice cylinder locks & latches
- Mortice lever locks & latches
- Rim/surface mounted locks & latches

CE Mark explained

Mechanical locks and latches intended for use on fire/smoke control doors are covered by the harmonised standard EN 12209 which sets out the requirements for testing and classifying locks suitable for CE marking in accordance with the Construction Products Regulation.

We recommend the use of a CE marked lockcase is the best way of ensuring the product you are using is fit for purpose and meets all legal requirements, particularly when used on fire doors.

Locks on escape routes

Locks fitted to doors which are on a defined emergency escape route must also be tested in accordance with **EN 179** and CE marked. The 9 digit code produced by assessment and testing defines the type of operation and the performance of each lock. For more information on EN 179 please refer to page 36.

What is the Kitemark

BS 3621:1980
Licence KM6662

BS3621 remains the most popular standard for domestic lockcases and has been adopted by most insurance companies as the benchmark for security. Locks tested and approved to the standard may carry the famous kitemark to attest that the lockcase has successfully undergone tests against the most common forms of attack such as drilling.

The Equalities Act - disability legislation

Legislation aimed at providing universal accessibility of buildings requires service providers to make "reasonable adjustments to the physical features of their premises to overcome barriers to access".

To meet obligations under the Equalities Act, Approved Document M (ADM) of The Building Regulations and BS 8300 the following guidance relating to lock and latch cases is provided:

- The minimum distance from the door edge to the centre of the keyway (backset) – BS 8300 states a minimum of 54mm
- The distance between the handle follower and the centre of the keyway (lock centres) – BS 8300 states a minimum of 72mm
- 'Lever handles should be used wherever possible in conjunction with an upright mortice lock/latch' (BS 8300)

Our Recommendation

For commercial buildings we recommend the use of European style lockcases with 72mm centres and a minimum of 60mm backset. The Briton 5600, 5500 and 5400 Series euro profile cylinder mortice lockcases have been designed specifically to meet the requirements of the European standard EN 12209 and are CE marked where appropriate. Look out for locks with this symbol.

Replacing an Existing Lockcase

If you are replacing an existing mortice lockcase you can find out the size you require by:

1.   Simply measuring from the centre of the keyhole to the forend of the lock. - this gives you the backset measurement.

2.   Measure the distance from the cylinder aperture to the lever follower - this gives you the lock centres measurement.

CASE SIZE

LOCK CENTRES

LOCK BACKSET
EN 12209 is the European standard for lockcases

Physical characteristics of type, operation and performance of lockcases is tested/assessed in accordance with EN 12209 (and EN 179 for locks on escape routes). This produces an 11 digit (EN 12209) classification code which allows comparison between different locks that conform to the standard. See examples below.

1. Category of Use
Defines the frequency of use.
Grade 3 - High frequency of use by public or others with little incentive to exercise care and with a high chance of misuse

3 / 1 - 3

2. Durability
Performance testing of the product through various cycle tests. Durability and Load On Latch (LOL) are identified
Grade H - 200,000 cycles; 10N (LOL)
Grade X - 200,000 cycles; 120N (LOL)

X / A - X

3. Door Mass & Closing Force
The mass of the door that the product is suitable for:
Grade 8 - Up to 200kg; 15N max closing force required

8 / 1 - 9

4. Fire Behaviour
Suitability for use on fire doors through testing to EN 1634
Grade 1 - Approved for fire door use subject to assessment

1 / 1

5. Safety
Safety category of the product.
Grade 0 - No safety requirement

0 / 0

6. Corrosion Resistance
Level of corrosion resistance to EN 1670:
Grade F - High resistance 96 hours at -20˚C to +80˚C
Grade G - Very high resistance 240 hours at -20˚C to +80˚C

G / 0 - G

7. Security
Security and drill resistance levels are identified
Grade 4 - High security with no drill resistance

4 / 1 - 7

8. Field of Door Application
Defines the applications the product is suitable for:
Grade B - Suitable for hinged doors in a mortice application and without forend support

B / A - T

9. Type of Key Operation
Defines the type of key operation and locking type:
Grade 0 - Not applicable
Grade A - Cylinder lock or latch with manual locking
Grade C - Cylinder lock or latch with intermediate locking

A / 0 - H

10. Type of Spindle Operation
Method of operation and compatible door furniture
Grade 0 - Lock or latch without follower
Grade 2 - Lock or latch for unsprung lever handle operation

2 / 0 - 4

11. Key Identification Requirement
Number of detaining elements and effective differs
Grade 0 - Indicates no requirement for key identification

0 / 0

Briton 5600 Series   Euro Profile Cylinder Lockcases

General Description

The Briton 5600 Series is a high quality, euro profile mortice lockcase offering Nightlatch and Escape Sashlock functions.

Principal Features

- CE marked (see individual details)
- Conforms to EN 12209
- Escape lock is approved to EN 179 for emergency exit applications when used with specific levers
- 60mm backset and 72mm centres in line with guidance of BS 8300
- Quick reversible latch for easy on-site handing
- Smooth and quiet latch action
- Single throw cylinder action
- Suitable for bolt through furniture fixings at 38mm centres and with guided holes to prevent ingress of material and assist furniture installation
- Suitable for unsprung lever furniture

- Testing: EN 12209 and CE Marked
              EN 179 (Briton 5660 only)
              EN 1634 fire testing for:
              90 mins timber fire doors
              and 4hr metal doors

- Guarantee: 10 years

CE 90 mins TIMBER 4hr STEEL EPD

IMPORTANT - Fire Door Installation:

When installing this product to a fire resistant timber door the lock must be fitted in conjunction with the intumescent protection to ensure that the integrity of the door is maintained in a fire situation.

Finishes

Available with a satin stainless steel forend with matching strike plate.

Briton 5200 Series   Dual Profile Cylinder Lockcases

General Description

The Briton 5200 Series is a contract quality, moritce lockcase range which can be used with euro profile or oval profile cylinders. The Series offers the most common range of lock functions.

Principal Features

- CE marked to EN 12209
- 57mm backset and 57mm centres
- Dimensional co-ordination across the range allows locks to be interchanged and doors can be factory prepared
- Unique X-Tension feature allows the spring tension to be adjusted
- Quick reversible latch for easy on-site handing
- Dual profile can be used with euro profile or oval profile cylinders
- Single throw hardened steel deadbolt to protect from sawing
- Suitable for bolt through furniture fixings at 38mm centres
- Suitable for unsprung lever furniture
- Supplied with square forend

- Testing: EN 12209 and CE Marked
            EN 1634 fire testing for:
            90 mins timber fire doors
            4 hour steel fire doors

- Guarantee: 10 years

IMPORTANT - Fire Door Installation:

When installing this product to a fire resistant timber door the lock must be fitted in conjunction with the intumescent protection to ensure that the integrity of the door is maintained in a fire situation.

Home security - a simple guide to what products to use where

It is worth remembering that 8 out of 10 burglaries are committed by opportunist thieves – in fact in 20% of cases, the burglar enters through a door or window that has been left open. Burglars are always on the lookout for an easy target so a few simple and cost effective precautions will help to put them off.

Door security

Most front doors are fitted with a **nightlatch**, which latches automatically when the door is closed, but can be opened from inside without a key. These provide a measure of security but can be forced by thieves so shouldn't be relied upon on their own.

All external doors should be fitted with a kitemarked lock or nightlatch certified to BS 3621. For timber doors we would recommend a **BS 5 lever mortice deadlock or a sashlock**. A door fitted with one of these can only be opened with a key, so a thief can't smash a glass panel or climb in through a window to open it from the inside.

An extra measure of security can be provided by fitting **rack** or **tube bolts**, top and bottom, to all exterior doors.

Perimeter security

Garden theft is on the rise and sheds and garages can also be vulnerable.

A strong, lockable gate fitted across a side passage will prevent a thief getting to the rear of a property. These can be secured using a **rim lock** or **padlock and hasp**.

Fit shed and garage doors with a strong padlock and hasp. Where there is a connecting door to the house this should be treated as an external door and fitted with a BS kitemarked lock.
Residential entrance security

Timber Door Construction

The door itself should be at least 44mm thick and constructed of solid timber with any panels a minimum of 14mm thick. The door frame must be solid and securely fixed to the walls at least every 600mm around the whole frame.

Any glass panels should be laminated security glass or have a metal grid or polycarbonate shield on the inside.

Door Hardware

The hardware fitted to the door can have a significant effect on security and as a consequence this can reduce the cost of some insurance policies. Please ensure you check the particulars of your own policy.

1. A good quality automatic deadlocking nightlatch should be fitted approximately 1/3 of the way down the door.

2. A good quality 5 lever mortice deadlock should be fitted approximately 1/3 of the way up the door. This should be a kitemarked lock to BS3621:2007 + A2:2012.

3. A door viewer allows the occupant to see who is at the door before opening the door.

4. A door chain allows the occupant to check who is calling without having to fully open the door.
5. Hinges

The door should be fitted with at least three, 100mm hinges. The hinges should be selected to suit the weight of the door and are generally available to suit different door thicknesses. The hinges should be in accordance with BS EN 1935.

Hinge Bolts

It is recommended to fit two or three hinge bolts midway between the hinges. These are essential if the door opens outwards as it prevents the door being opened by cutting or grinding off the hinge knuckles.

♥ BS 3621:2007 Licence KM662

Mortice locks can either be operated by a cylinder (see commercial lockcases) or by integral levers. In the case of lever locks the higher the number of levers, the more security the lock provides. Most insurance companies require that external timber doors are secured by a British Standard 5 lever mortice lock or mortice nightlatch. Look for the Kitemark when specifying and purchasing products. Internal doors and those on outbuildings can be secured by a 2 or 3 lever lock, but these will not offer the same level of security as a BS 5 lever kitemarked lock.

Sashlock

Has 2 bolts, a key operated deadbolt and a separate handle operated latchbolt. Ideal for use on doors which are in frequent use and which can be locked.

Deadlock

Has a key operated deadbolt and is mainly used for securing main entrance doors as additional security when using a rim nightlatch.

Bathroom Lock

A mortice lock for use on doors where privacy is required. Should be used with bathroom door furniture.

Legge Locks

Twist reversible latch bolt

To assist you in the selection and installation process all our platform range of mortice lever locks incorporate this feature, which offers a fast and easy way of reversing the hand of the latch in seconds, without the need to open the lockcase. This means that you do not need to know the hand of the door when selecting your lock.
If you are replacing an existing mortice lockcase you can find out the size you require by:

1.   Simply measuring from the centre of the keyhole to the forend of the lock. - this gives you the backset measurement.

2.   Measuring the distance between the edge of the case and the edge of the forend - this gives you the case size.

LOCK BACKSET (b)
Legge Platform Series   BS 5 Lever Locks

General Description

Legge BS 5 lever lockcases offer exceptional levels of attack resistance making them an ideal choice for domestic and commerical applications.

Principal Features

- A range of Kitemarked BS 5 lever sashlocks and deadlocks
- Suitable for bolt through furniture fixings at 38mm centres

---

- Testing:
  CE Marked to EN 12209 Grade 7
  Fully compliant with BS361:2007 and kitemarked
  Fire tested to EN 1634 on timber and composite doors to achieve 1 hour fire rating, and 4 hour steel doors.
- Guarantee: 10 years (BS 5 lever locks)

Secondary Security   Rack Bolt
B464

Principal Features

- Morticed bolt suitable as additional security
- When fitted bolt is not seen from outside
- Operated by key from inside
- Recommend one bolt is used top and bottom of a door

Item Ref:	Description	Finishes
B464	2 Rack bolts with 1 key	SS; PB
B465	2 Rack bolt keys only	Miscellaneous

Rim Nightlatches

Most front doors are fitted with a rim nightlatch, which locks automatically when the door is closed, but can be opened from the inside without a key. Most can be deadlocked by a snib from inside or by turning the key from the outside. These provide a measure of security but can be forced by thieves so shouldn't be relied upon on their own. On external doors they must always be used in combination with a BS kitemarked lock.

Our Briton range of nightlatches provides a series of surface mounted nightlatches with both deadlocking and non deadlocking functions. These are suitable for use on inward and outward opening doors (separate strike plates will be required for outward opening doors).
When selecting a replacement nightlatch, it is important to check that the backset (B) (ie. the measurement from the centre of the keyhole to the edge of the door) is the same as your existing lock. If you are fitting a lock to a new door, choose the longest backset that allows a comfortable fit.

Rim Locks

A surface mounted rim lock should only be used where a high level of security is not required. Rim locks are ideal for internal doors, particularly in period properties or gates and outbuildings.

Our Briton range also includes a selection of knobs with 8mm spindles to operate our rim locks.

Legge 707 & 727   Multifunction Rim Nightlatches
Principal Features

- Brass latchbolt
- Suitable for most retrofit applications
- Clockwise or anti-clockwise knob operation to withdraw latch
- Latch and knob are rendered inoperative by the deadlocking function
- Supplied with 5 pin rim cylinder
- Guarantee: 3 years

Cylinders

Cylinder locks are a very flexible and sophisticated means of providing security on most doors and have a number of advantages over other methods of door locking. They give you the ability to:

- Select the most appropriate lockcase and cylinder combination
- Match the level of security to the precise needs of each door in a building
- Upgrade security levels as the needs of the building or its occupants change
- Provide sophisticated masterkeying and key control where access to multiple doors can be restricted to specific personnel

Patent Protection on cylinders

Since copyright protection on keys was abolished it is now possible for anybody to produce and sell most types of keys. The only systems that can truly protect against illegal keyblank duplications are patented key systems. Manufacturers can take legal action against any third parties who distribute copies of patented keys without permission.

The Briton 75-29 range is patent protected until 2029, thus ensuring the highest possible levels of security and patent protection for all.

Cylinders - The CISA and Briton Range

Both the CISA and Briton ranges of cylinders include euro and oval profiles, which can be supplied either standard differ, keyed alike or masterkeyed. This catalogue focuses on euro profile cylinders as they make up the majority of the UK market. For further information on our complete range of cylinders contact us on: **0330 8080 617.**

Addressing physical security

An intruder seeking to break open a door will in most cases choose to "attack" the lock cylinder. Methods of protecting against forced entry are 'defensive' features of passive security.

1 - Push resistance
A projecting cam on the cylinder can prevent it from being forced out of the lockcase by a hammer blow.

2 - Drill resistance
The incorporation of steel pins within the cylinder are designed to resist or delay attacks from drilling.

3 - Pick resistance
Special pin configurations can resist the manipulation of the pins in an attempt to simulate the key.

4 - Snap resistance
The inclusion of hardened steel laminates within the body of the cylinder can prevent violent twisting and snapping of the cylinder.

5 - Bump resistance
Bumping of cylinders is becoming more of an issue throughout Europe, particularly as there is no sign of forcible entry for homeowners to claim on insurance.

Bumping and Snapping

Bumping and snapping are the prevalent forms of cylinder attack sweeping across Europe. The problem is being exacerbated by internet sites spreading the word amongst the criminal community.

We pride ourselves on being at the forefront of the market with our CISA cylinders and we are able to offer tried and tested cylinders to provide protection from just these kinds of attack. Our Astral ranges incorporate features designed to make them bump and snap resistant.
What is the right length of cylinder?

Selecting the right length of cylinder is important not only for aesthetic reasons but also:

■ To limit the amount of cylinder that projects from the face of the door hardware in order to protect it from attack by twisting and snapping

■ To avoid the risk of hitting the cylinder with the hand when using lever handles

Selecting the correct cylinder length

Specifying the correct cylinder length is important not only for aesthetic reasons, but also for security. The cylinder must be fitted as flush as possible with the surrounding hardware in order to reduce the opportunity for the cylinder to be removed.

When choosing a cylinder, three factors should be considered:

·   Thickness of door

·   Thickness of hardware, eg. Escutcheons or backplate

·   Position of the lock within the door

The overall length of the cylinder should be just larger than the combined thickness of the door D (see diagram below) and the backplates or escutcheons (D + 2X).

When using a thumbturn, an additional 2mm clearance is recommended.

CISA Astral S Series - Anti-Snap & Bump Resistant Cylinders

General Description

Traditional cylinders used in most PVCu doors are open to attack from unscrupulous thieves, who are using the internet to spread the word on how to attack them.

CISA has a cylinder range to combat this ever increasing problem and provide levels of high security and protection against these methods of attack. CISA Astral S cylinders have a unique visual snap resistant core, which has been designed to deter thieves from trying to attack the lock and thus prevent damage to the door.

Astral S cylinders are kitemarked to TS007 1 Star. TS007 is aimed at the retrofit market, and has been introduced specifically to address the vulnerabilities of lock cylinders. The standard, which uses a star rating, has been created to offer protection against cylinder snapping, bumping and other methods of access. The new standard is designed as a three star solution. Under the ratings, a three star solution can be achieved by a combination of a cylinder (marked with 1 star ie: Astral S) and security door furniture such as a strengthened door handle (marked with two stars).

For added convenience the Astral S cylinders are completely interchangeable with the standard Astral range allowing them to be used specifically where increased security is required.

The drawing below shows you the added protection we have incorporated into the range.

TS007:2012
Licence KM532990

Clutch cam fitted as standard to allow operation even if the key has been left in the other side

Hardened steel pins and drivers protect from drilling

DIN standard sintered steel cam provides push resistance to prevent the cylinder being forced out of the lockcase. BKP Bump resistant device fitted as standard

Special driver profile provides "pick protection"

Patented laminated steel core provides snap resistance to both flexural and pulling test. The core is also visible from both ends to provide a visual deterrent

Reversible flat key
A code card ensures a high quality duplicate key
3 keys supplied as standard

CISA Astral S Series   Medium Security Euro Profile Cylinders

TS007:2012
Licence KM532990

CISA C2000 Series — Basic Security & Masterkeying

General Description

For applications where strict control over key duplication is not such a high priority, the C2000 system offers a basic level of physical security but with the added convenience of local key cutting.

Principal Features

- Suitable for Briton 5600, 5500, 5400, and 5200 Series lockcases
- Hardened steel pin and driver in the first position protect from drilling
- Pick resistant profiled brass pins and drivers
- 5 pin key bitting system offers over 30,000 key differs
- DIN standard sintered steel cam provides push resistance to prevent the cylinder being forced out of the lockcase
- 3 keys supplied as standard

- Testing: EN 1303:2005 compliant
  Grade 6 durability
  Grade 4 key security
  Grade 0 attack resistance

- Guarantee: 2 years

Standard & Offset Cylinders

The C2000 range comprises euro profile cylinders in single, standard and offset double and standard as well as offset double with thumbturn in a wide selection of lengths and offsets. The system is also available in rim and rim mortice cylinder options.

For more information call our Customer Care Centre - **0330 8080 617**

Briton 75-29 Series   Basic Security & Masterkeying

General Description

A range of Euro profile and oval profile cylinders with patented key design to prevent unauthorised key duplication.

Principal Features

- Patented key profile prevents unauthorised duplication to 2029
- Drill and pick resistant
- Key blanks carry a lifetime warranty
- 'Through-cut' technology utilises a unique process to produce the patented undercut design
- 6 pin tumbler system with additional 'check pin' for extra security
- Raised plug with unique slotted face for improved aesthetics
- Additional functions include Classroom function, construction keying and anti-barricade function.
- 2 keys supplied as standard

- Testing: EN 1303:2005 compliant
  Grade 6 durability
  Grade 5 key security
  Grade 2 * attack resistance

- Guarantee: 2 years

* when used with a security escutcheon

CISA Padlocks

CISA offer a wide range of padlocks covering all levels of security suitable for both commercial and residential use. They can be supplied individually keyed or keyed alike for increased convenience.

Shackle Type

The shackle is the u-shaped metal bar used to attach the lock to the hasp or chain. There are three styles of shackle shown below. When selecting your padlock it is important to consider the distance that you will have to secure the shackle into the lock. In principle, the shorter the shackle the less vulnerable the padlock is to attack.

Standard Length	Long Shackle	Slide Bolt

Application

All our padlocks are suitable for indoor use, however for outdoor use we recommend using a laminated or marine grade padlock to reduce the risk of corrosion. Our marine grade padlock has been designed specifically for locations close to the sea and has undergone a 1000 hour salt spray test.

CISA 28000 Series   Hardened Steel

28050

General Description

Provide a high level of attack resistance and strict control of key duplication.

Principal Features

- Range of shackle lengths and thicknesses
- Steel bodies & hardened steel shackle
- Supplied with differ cylinder as standard
- Nickel plated finish
- 2 keys supplied as standard

720018855156	Shackle-less padlock	73mm case
720018855101	Security hasps	264 x 216 x 216mm

Briton Door Furniture

The Briton door hardware ranges are compact ranges of door furniture which are ideally suited for use with the Briton 5600, 5500 and 5400 Lock Series.

Both ranges feature a selection of rose mounted lever furniture with matching escutcheons and a co-ordinated pull handle to satisfy the majority of door functions.

Durability

All items are manufactured in stainless steel for strength, durability and corrosion resistance.

All leversets are pre-fixed to roses and are assembled using bolt through fixings and a through spindle which is fixed to each lever by grub screws.

Briton contract levers have all been successfully tested to EN 1906 Grade 3.
Briton commercial levers have all been successfully tested to EN 1906 Grade 4 .

The Equality Act (disability legislation)

This legislation places a duty to avoid discrimation against disabled people and requires that reasonable adjustments are made to the design of buildings to provide a universal level of access.

In such circumstances the recommendations of BS 8300 and Approved Document M of the Building Regulations will be used as the basis for determining best practice.

In general terms, doors must be easy to use for the maximum number of users and a badly designed, positioned or fitted handle may form a barrier to some people.

Lever Furniture - recommendations in BS8300 include a 'hand grip' zone as indicated opposite (Fig.1). Fixing heights for lever furniture are recommended at 800 - 1050mm from floor level (with 900mm the preferred position).

Locks - are recommended to have a backset of at least 54mm and with the handle to cylinder position 72mm maximum.

Pull Handles - lengths and mounting positions are as indicated opposite (Fig.2). The minimum length of pull handle is 300mm. Handle diameters of 19 - 35mm are recommended.

It is also recommended to fit a horizontal pull handle to doors which are not fitted with self closing devices to assist wheelchair users in closing the door (Fig.3).

Thumbturns - should be avoided where possible as they can be difficult to operate for people with limited mobility or strength such as those with arthritis. Where they are needed they should be as large and easy to operate as possible.

Where products comply with these recommendations they are marked with the wheelchair symbol.

Fig.3

Briton 4700 Series   Leversets

General Description

The Briton 4700 Series of door hardware is a high quality, high specification range of lever and pull handle door furniture and accessories in satin stainless steel.

The range encompasses the complete hardware requirement of the large majority of doorsets.

Principal Features

- Stainless steel grade 304
- Back to back fixing bolts and threaded bushes on lever furniture
- Levers are prefixed to unsprung roses only 4mm thick
- Unique 'ClickFit' systems for rose and escutcheon covers
- Supplied with bolt through fixings and spindle suitable for doors 44 - 54mm thick
- Spindles fixing with "break thru" grub screws for greater security and durability

---

- Testing:

EN 1906 - Grade 4 category of use
EN 1670 - Grade 3 corrosion resistance
EN Classification   4 7 - B 1 4 0 U

EN 1634 for up to 2 hour timber fire door applications and up to 4 hour steel fire door applications

- Guarantee: 10 years

Normbau Design System

Normbau is a comprehensive range of colour co-ordinated architectural hardware offering durable, long lasting door furniture and specially designed fittings for elderly and disabled users.

The versatile range of levers and pull handles in a selection of sizes and fixing options are available as either solid nylon or with a corrosion resistant steel core for extra strength.

Special Needs Programme

The Normbau range features a large selection of products including cloakroom fittings, shower rails and support systems designed specifically for the elderly and people with special needs. The range will provide many solutions to washroom and bathing facilities to meet the demands of The Equality Act.

Nylon incorporates a unique textured surface to provide improved grip and being a poor conductor of heat is comfortable to touch compared to similar products in stainless steel.

The high impact colours are also particularly suitable for areas used by partially sighted people as they provide the opportunity to maximise contrast with the surrounding surfaces.

Normbau support systems are fully modular and are designed to meet the standard requirement of Part M of the Building Regulations.

Suitability of Nylon

Normbau architectural hardware is in constant use in public and commercial buildings throughout the world and has a proven track record of durability and performance.

As the nylon is coloured throughout, the colour will not chip or scratch off, it will not fade or wear off with rough handling and this makes it an ideal choice for use in areas of heavy usage.

Fire Testing

Door furniture has been successfully tested to EN 1634 for use on timber fire doors with up to 2 hour fire rating and up to 4 hour on steel doors. Please contact us for further information.

Standards

Normbau products have been approved by the PSA for MOB H3PS high duty performance standards and lever sets conform to EN 1906.

Infection control

Normbau antibacterial protection is an integral constituent embedded within the nylon during production which provides effective and long-lasting protection against the growth of harmful micro-organisms and bacteria such as E.coli, S. aureus and MRSA.

It provides an extra level of hygiene in hospitals, care homes and many other types of public access buildings, helping to keep surfaces cleaner and reduce the risk of cross-contamination.

Please note, colours marked † below have the Normbau antibacterial protection as standard.

All products are available as standard in 9 distinctive colours. Other colours to match corporate environments can be achieved at additional cost.

For the purpose of colour co-ordination with other building elements we have provided the nearest RAL-DS colour reference.

Door Furniture

General Description

A comprehensive range of colour co-ordinated architectural hardware offering durable door furniture and accessories.

0282 01 coupe lever with
0525 10 latch backplate

Principal Features

- Solid nylon material with colour running all the way through which cannot be scratched or chipped off

- Lever furniture is available either pre-assembled with rose or backplate, or separate to a range of roses or backplates for added flexibility

- Lever handles are available in solid nylon or with a steel core for added strength

- Lever and rose assemblies are available with simple nylon bearing or with a quick assembly, maintenance free ball bearing race

- Pull handles of 300mm centres and above comply with the recommendations of BS8300

- Testing:

  EN 1906 - Grade 4 category of use

  Fire tested to EN1634 on timber doors to achieve 1 hour fire rating (pull handles)
  2 hour rating (lever furniture) and 4 hour for metal doors (pull and lever furniture)

  Approved by PSA to MOB H3PS high duty performance

- Guarantee: 5 years

- Full Declaration of Performance available from our website at:

- **www.britondops.co.uk**

Normbau   Leversets

Lever assemblies

Levers are supplied in 3 arrangements with loose roses or backplates (as shown opposite) or pre-assembled with the rose or backplate inner.

In all cases, one lever is supplied with a floating spindle which engages within the lever on the opposite side.

All lever and rose or backplate assemblies are supplied with back to back though fixings to give a positive and durable assembly.

Scope of Access Control

Controlling access is vital if the security of buildings is not to be compromised. In buildings where there are a variety of users with different areas of responsibility and different security priorities, masterkeyed systems for cylinder locks have traditionally provided the simplest, and most cost effective way of managing controlled access to facilities.

There are however, a number of alternative ways of providing controlled access depending on the level of security required, the degree of convenience, the budget available and the possible need for future expansion of the system. All these aspects need to be considered before selecting the most appropriate solution.

For many situations the use of a cylinder lock may not be the ideal solution to the security requirements of a specific door. The reasons can be many and varied. A door which is required to be kept locked whilst allowing 'keyholders' access can be inconvenient if the door is in constant use or if the number of users is very high. Similarly, a high turnover of users can become a nuisance if keys are not returned and the cylinder has to be constantly replaced to maintain security.

At the other end of the scale a high degree of control may be required allowing the building or facility owner to more closely control or monitor who accesses the door. Such increased control could include determining not only who has access, but at what times and for how long. In such circumstances electromechanical or electronic access control systems provide a more appropriate solution.

There are many levels of access control from mechanical digital locks and simple off-line battery powered electronic locks, through wireless electronic locks using proximity card technology to full on-line integrated access control systems.

Allegion is able to offer access control products at all levels, however here we have concentrated on the most common trade products.

If you require further guidance on access control, or for information on Allegion's ranges of electronic access control or biometric access control please call our technical helpline on 0800 834102 or go to www.allegion.co.uk

Mechanical access/egress control
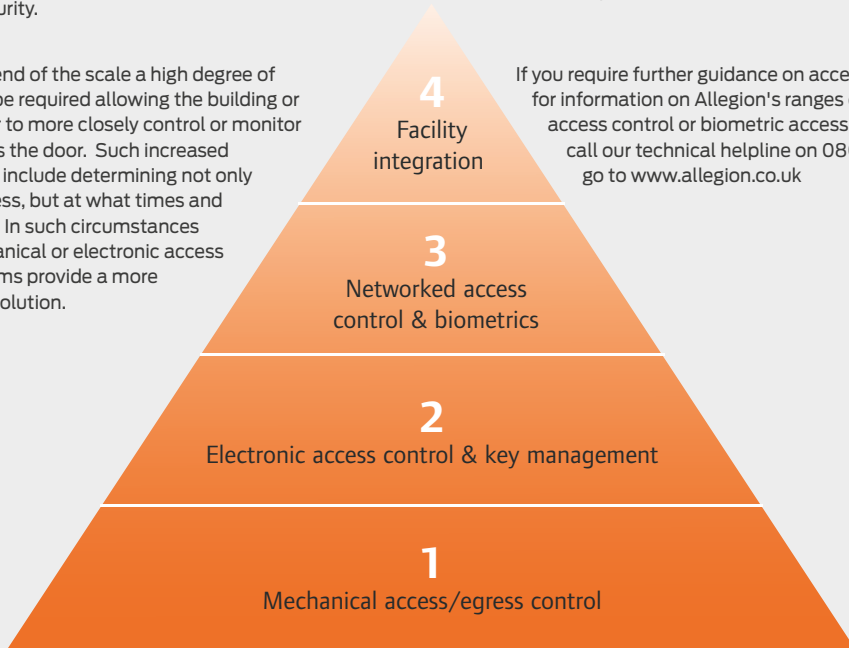

Briton 9160 — Mechanical Push Button Code Lock

General Description

A simple means of securing a door which requires restricted but convenient access such as an office, workshop or storeroom.
Principal Features

- Digital deadlocking mortice latch
- Easy to fit
- Doors unlocked simply by entering a pre-set code
- Codes changed quickly and easily
- Optional hold-open function (non-hold open can be engaged easily, if required)
- Suitable for light duty and internal use
- Spindle can be cut on site to suit doors 30-60mm thick
- Guarantee: 5 years

Briton 9260 — Mechanical Push Button Code Lock

General Description

A simple means of securing a door which requires restricted but convenient access.
Principal Features

- Digital code lock with over 2047 non sequential code options
- Available with extra long spindles for use with Briton exit devices
- Lever operation with clutch mechanism
- Code changed by removing the unit from the door
- Available in satin or polished stainless steel, or polished brass
- Guarantee: 5 years

Briton 9360 — Electronic Digital Code Lock

General Description

A simple means of upgrading an existing mechanical digital code lock, or for new installations.

Inside unit

Outside unit

Principal Features

- Uses the same fixing holes as many common mechanical code locks
- Simple and quick replacement for upgrading a mechanical code lock to an electronic digital code lock
- Does not require the unit to be removed to change codes
- Up to 80 user codes of 4 to 6 digits
- Up to 10 'One Time' user codes
- Over 80,000 operations from 2 x AA batteries (supplied with product)
- External battery override contacts
- Key override as standard
- Supplied with tubular mortice latch
- Non handed
- Guarantee: 5 years

Briton 9500 Series   Electromagnetic Locks

The Briton 9500 Series is a high quality range of 'face to face' locking devices offering up to 545kg holding force. The range includes small footprint 'mini-mags' for lower security applications and a mortice mounted version for use with custom made architectural housings for single or double door applications.

As standard, 9500 Series electromagnets are suitable for outswing doors but can be converted for use on inswing doors using a series of Z and L brackets.

Principal Features

■ Extruded aluminium housing with adjustable mounting bracket for quick and simple installation

■ Suitable for single swing doors

■ All units are "fail unlocked" providing safe exit in the event of power failure or an emergency when interfaced to a fire alarm output

■ Monitored and unmonitored versions where indicated

■ Door status monitor (DSM) indicates when a door is open or closed when monitored remotely

■ Steel armature is fixed through the door for a secure mounting

■ Mortice version is designed for installation into architectural housings, either horizontal or vertical

■ Testing: CE marked to EN61000 for Electromagnetic compatibility Directive 2014/30/EU

■ Guarantee: 3 years

$C\,\epsilon$
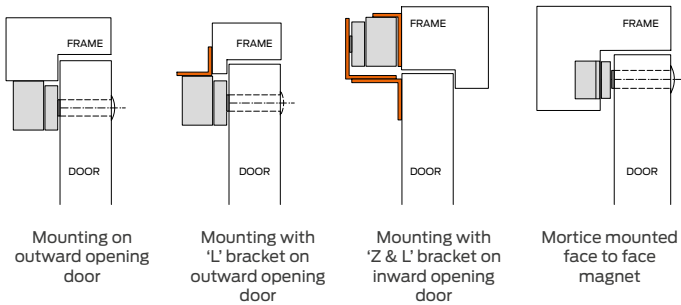

Technical Specification

■ Voltage - 12v or 24v DC (all models)

■ Current draw
9501/9502/9551/9552
500mA @ 12v DC
250mA @ 24v DC

■ Current draw 9560
480mA @ 12v DC
240mA @ 24v DC

■ Holding forces

272kg per leaf (9551/9552)

544kg per leaf (9501/9502)

272kg per leaf (9560)

Installation options

Mounting on outward opening door

Mounting with 'L' bracket on outward opening door

Mounting with 'Z & L' bracket on inward opening door

Mortice mounted face to face magnet

Freestanding Display Units

To help our retailers in displaying and selling out our products we have developed a range of merchandising units designed to provide flexible display options in store.

Research has shown that by displaying ironmongery products better in store and providing selection tools to assist purchasers with their product choice, sales of these products are significantly increased.

Currently of all the fire doors sold out of UK builders merchants less than 20% include the corresponding sales of fire door ironmongery. However by placing an ironmongery merchandising unit adjacent to the fire doors this figure can be significantly increased.

In this section we highlight units as well as details of other point of sale and selection tools to help you in maximising your ironmongery sales.

Principal Features

- Designed to provide flexible display space in store
- Ideal for gondola ends or sighting next to fire doors or trade counters
- Low height ensures that good visibility throughout store is maintained
- Supplied complete with Selection Guides for Briton Door Closers and Exit devices to help customers to choose the product they need for their particular application
- Designed to display a core range of Briton door closers, exit devices and commercial locks suitable for use on fire doors
- Incorporates literature holders for displaying Briton literature

To place an order for these units please contact your Key Account Manager or call our marketing department on 0121 380 2454 for more information.

Briton

Display Boards & Lock Blocks

General Description

For instances where it is not possible to have stock on display we are able to provide product display boards and lock blocks.

Bespoke Display Units

If your display requirements do not suit our standard display units we are willing to work with you in developing bespoke units to meet your exact requirements.

Please contact your Key Account Manager to discuss your requirements in more detail.

Briton
Product Selectors, Posters & Counter Mats

Principal Features

- Designed to help customers in selecting the right product for their particular application depending on the type of door, its location and its usage

- Providing guidelines on CE marking and the latest European standards they help to ensure their product choice meets with the latest building regulations

ADDITIONAL POINT OF SALE

If you have any specific POS requirements outside of what we have detailed here please contact our marketing department on **0121 380 2454**

or email **contactuk@allegion.com**

Anti-Drill Plate
Steel plate with sufficient hardness to resist penetration by a HSS drill bit

Anti-Thrust Action
Latch action in which the latch bolt, when fully thrown, resists being forced back by end pressure

Anti-Thrust Bolt
Spring actuated bolt which cannot be pushed back once it has been fully thrown into a correctly positioned locking plate

ASTM
An International voluntary standards development organisation

Backcheck
A 'cushioning' effect to prevent damage to door and adjoining structure if door is thrown or blown open

Backplate
Separate component on back of product providing the fixing means

Backset
Distance from the outer face of the forend (or faceplate if fitted) to the centre-line of the keyhole and/or follower

Bathroom Lock
Privacy lock with latch bolt operated by lever handle or knob from both sides, and an additional deadbolt operated by thumb slide, thumb turn etc, from inside only

BKP
Special patented device which prevents the cylinder from being bumped

Bolt
Moving part of a lock or latch that provides engagement between leaf and frame

Bolt Through Fixing
Method of installation whereby the fixing means pass right through the door

Bumping
Where cylinders are bumped, leaving no sign of forcible entry

CE
CE marking is a mandatory European marking for certain product groups to indicate conformity with the essential health and safety requirements set out in European Directives

Certifire
Is an independent third party product certification at a higher level, a quality mark, designed to enable manufacturers to demonstrate a difference between their products and those satisfying only the minimum requirement

Classroom Function
The classroom function in a thumb-turn cylinder makes it possible to rotate the thumb-turn in one direction only. This is usually used to ensure that someone inside a room cannot lock anybody out but can always escape in an emergency. The cylinder is also clutch release so somebody in the room cannot prevent a key holder from entering

Closing Speed
Speed at which a door leaf is allowed to close when under hydraulic control

Deadbolt
Bolt that can be deadlocked

Delayed Action
Inbuilt function of any door closing device that allows the closing moment to be adjusted

Differs
Refers to the key arrangement of a lock, with the higher the number of differs providing the greater key security

Dogging
A device found on exit hardware. If an exit door permits unrestricted traffic flow, a dogging device is a means of holding back the latch bolts when required

Door Closer Power Size
Usually determined by size and weight of door

Drill Resistance
Cylinders that have one or more steel components in the cylinder which are designed to resist or delay attacks from a drill

EN
European Normative Standards Agency

Electromagnetic Hold Open
A closer with an integral electro magnet allows a fire door to be held open for convenience. The magnet is linked into the fire alarm system and automatically releases the door when the fire alarm is activated

Electromagnetic Swing Free
As electromagnetic hold open, but permits a fire door to be 'free swinging' for convenience. Not recommended for general traffic areas

Escutcheon
Component which surrounds the entrance to a keyhole at the surface of the leaf, for decorative purposes

Euro profile Cylinder/DIN Cylinder
Profile cylinder for which the cross-section of the housing is to the standard European profile

Exit Device
Device that provides an emergency or panic exit function of an escape route

Handed
Restricted to one particular closing or opening direction

IP rating
This is the degree to which an item is protected from the environment

Keyed Alike
Operable with the same key

Latch Action
Self-engaging fastener which secures the leaf of a door in the closed position, and which can be released by hand

Master Keyed
Key that operates locks of all combinations in a suite

Nightlatch
Lock with automatic bolt which is withdrawn from outside by key, and from inside by handle or knob

Non-Handed
Not restricted to one particular closing or opening direction

Outside Access Device (OAD)
Mechanism for opening exit device from outside

Panic Latch
Latch which is released by pressure anywhere along a horizontal bar running the width of the door

Pick Resistance
Special configuration of hardened pins and drivers within a cylinder to resist attack by specialist picking tools

Push Resistant
A cam that protrudes from the cylinder body to anchor firmly to the lock preventing it from begin dislodged by a hammer blow

Part M
Building regulations Part M 2004 Access to and Use of Buildings

Pullman Latch
Panic Exit latch with curved bearing surfaces to facilitate engagement and release under side load

Push Bar
Horizontal bar of a panic exit device which is used to activate the mechanism

Push Pad
An accepted operating elements of an emergency exit device

Rim Cylinder
Cylinder for use with a rim lock or latch, which is adapted for flush mounting with a leaf

Rim Deadlock/Latch/Rim Lock/Night latch
Adapted for surface mounting on the face of a leaf

Snap Resistant
Patented laminated steel core that provides snap resistance to both flexural and pulling test

Sprung
Hardware containing a spring mechanism which enables the door handle to return to the horizontal position after use

Template Adjustable
Door closer strength determined by fixing position

Thumb Turn
Small handle or knob for operating by thumb and forefinger

Track Arm
A single arm which avoids the need for projecting arm

Tri-packed
Offer various fixing positions ie regular, transom & parallel

Vandalgard
Clutching mechanism designed to guard against user abuse

Windthrough Adjustable
Door closer strength determined by physical windthrough adjustment of the closer spring

The hardware products detailed within this catalogue are available in a wide selection of finishes including:

- Solid metallic finishes
- Electroplated metallic finishes
- Powder coated metallic finishes
- Powder coated coloured finishes

Due to the limitations of the printing process it is advisable to check your choice of finish against actual product.

Solid metallic finishes

The solid metal finishes are polished finishes on stainless steel, aluminium or brass. The final finish is either a satin or bright mirror polished finish. Aluminium finishes are then anodised, brass finishes are protected with a lacquer unless indicated otherwise.

Plated metallic finishes

Products and components which are manufactured in other materials may be given metallic plated finish either for corrosion protection or to match other related items. For example, some items may be manufactured in brass or steel but have a satin chrome or satin nickel plated finish to integrate with satin stainless steel finishes.

Powder coated metallic finishes

A large range of items are available in a metallic powder coated finish which provides a consistent finish across a range of products manufactured in different materials. They provide good corrosion resistance, particularly suitable for items which are used externally.

Powder coated coloured finishes

The powder coated coloured finishes are specially formulated to provide a close match to the coloured nylon finishes of our Normbau range of door hardware.

Product variations

Door Controls

All door controls, whether projecting, parallel or track arm variants, are supplied with arms, brackets and/or tracks finished to match the body cover. In these situations the finish is quoted with a suffix S. For example, a closer in SE (powder coated silver) finish which has matching arms/brackets is specified as SES finish.

Black arm sets only available for 996 Series.
